

Numbered Chronology Articles

by John P. Pratt
Updated 8 Dec 2014

The following article numbers are used in some of my writings to refer to the articles by the numbers listed here. The article numbers are assigned in chronological order of publication. The references may contain periods or hyphens. Periods refer to section numbers and hyphens to endnote numbers. For example, the reference [3.4.2](#) refers to article 3 below ("Yet Another Eclipse for Herod"), section 4.2 within that article. On the other hand, the reference [3-38](#) refers to endnote 38 of that same article. As with these example links, most have actual links to the section or endnote for easy navigation to the reference. I am the author unless otherwise stated. The first 22 articles were published in the volume [*Divine Calendars: Astronomical Witnesses of Sacred Events*](#).

Article 1. "The Restoration of Priesthood Keys on Easter 1836, Part 1: [Dating the First Easter](#)," *Ensign* **15**, No. 6 (June, 1985), pp. 59-68.

A summary of the evidence used to date the Resurrection of Jesus Christ, proposing that Sunday, 3 April A.D. 33 (Greg.) is the most likely date. Most of the evidence is from the Bible; with only a few references to L.D.S. scriptures, so it should be almost totally understandable to other readers.

Article 2. "The Restoration of Priesthood Keys on Easter 1836, Part 2: [Symbolism of Passover and of Elijah's Return](#)," *Ensign* **15**, No. 7 (July, 1985), pp. 55-64.

A summary of the reasons Passover was symbolic of the sacrifice and resurrection of Jesus Christ, followed by a discussion of the calendrical significance of the return of the Prophet Elijah to the Kirtland Temple on Easter Sunday, 3 April 1836. It is Part II of Article 1.

Article 3. "[Yet Another Eclipse for Herod](#)," *The Planetarian** vol. 19, no. 4, Dec. 1990, pp. 8-14.

The date of the birth of Christ is usually estimated from the date of the death of King Herod, generally believed to have been in 4 B.C. Herod's death date is tied to a lunar eclipse, usually thought to be the one that occurred in March of that year. This article is the first to propose that the correct eclipse occurred in December of 1 B.C. and that Christ was born around Passover of 1 B.C.

Article 4. "[Passover: Was it Symbolic of His Coming?](#)" *The Ensign* **24**, 1 (Jan,

1994), pp 38-45.

It is widely believed among Christians that the Jewish Passover was symbolic of the death of Jesus Christ (1 Cor. 5:7). This is the first article that proposes that Passover also symbolized the *birth* of Jesus Christ.

Article 5. "[When Was Judah's 70-Year Babylonian Captivity?](#)" *Ensign* **28**, No. 10 (Oct, 1998), pp. 64-65.

Jeremiah prophesied that the captivity of Israel in Babylon would last 70 years. Many commentaries state that the captivity only lasted less than 60 years. This article suggests that if Jewish reckoning is used from the date of the first captives, then it lasted exactly 70 years.

Article 12. "[Coordinates for the Constellations](#)," (25 April 2001).

The constellations have proven to be an enduring map, but have never had a coordinate system fit to them. Sidereal coordinates are proposed, measuring longitude along the ecliptic from the star Pi Vir. A Uniform Vernal Equinox is also defined.
